

HENSOLDT SKS 40-31 CALIBER BAR

Universal Muzzle Boresight Devices

The higher the hit probability of a weapon, the greater its combat value. Battlefield supremacy, increased survivability and less ammo usage are among the easily achievable advantages of a well-adjusted weapon system. The risks of collateral damage and friendly fire are comparably minimized as is the risk of counter-fire caused by missing the target with the shot - and missing the target is no option.

The Universal Muzzle Boresight Devices from Hensoldt Optronics provide the cost effective means to adjust aiming sights of almost all guns in today's service. Being compatible from 5.56 to 155mm caliber it is usable from factory to crew-level for long and short range alignment. The Universal Muzzle Boresight Devices ensure highest precision, where it is needed - on target.

HENSOLDT SKS 40-31 CALIBER BAR

Mechanical Data		Features and Benefits
Length	438,5 mm	<ul style="list-style-type: none">• Highest weapon percision• Rugged design• Almost no lifecycle costs• Easy handling
Stop plate	58 mm	
Weight	2,35 kg	
Protective sleeve	n/a	
System Performance		
Tolerance	40,80 - 41,20 mm	
Accuracy (max. deviation relative to gun barrels axis)*	< 0,2 mil	
Max. lenght flash hider / muzzle brake	149 mm	
General Data		
Environmental test (in extracts)	MIL-STD 810 G	
Compatible Weapon Systems		
General Dynamics MK19 GMG, CIS 40 AGL		
Ordering Numbers		
Drawing No.	80-009-02-0142790	
NATO Stock No.	n/a	
Accessories		
Standard and costumized container solutions available on request		

*In conjunction with SZR boresight telescope
